Top Skills

Node.js
TypeScript
NestJS

Ivan Genes

Senior Backend Engineer | Node.js, TypeScript & NestJS | Microservices, AWS & Distributed Systems | Tech Lead | AI-Assisted Development
Greater Buenos Aires

Summary

Senior Backend Engineer with 8+ years of experience designing and building scalable APIs, microservices, and web applications for cross-border e-commerce, logistics, insurance, and automotive projects, for example NocNoc, Pickit, Sura Seguros, and Yamaha.My primary backend stack is Node.js, TypeScript, and NestJS. I also have professional experience with Java, Spring Boot, PHP, Symfony, and Laravel, allowing me to work across different backend ecosystems.I have experience developing REST APIs, microservices, and distributed systems using AWS services such as DynamoDB, Amazon SQS, and EventBridge, as well as RabbitMQ, Docker, CI/CD, MySQL, PostgreSQL, MongoDB, and automated testing.I have also worked as a Backend Tech Lead, contributing to solution design, microservices architecture, technical decision-making, team guidance, deployments, and code quality improvements.Currently, I integrate AI-assisted development practices into the software development lifecycle. I create reusable custom skills and AI agents using Claude Code and OpenAI Codex, and apply Spec-Driven Development to transform requirements into structured specifications, implementation plans, and development tasks. These practices help improve development consistency and accelerate the delivery of new features and software solutions.

Experience

W3 IT SOLUTIONS

7 years 1 month

JavaScript developer

February 2022 - Present (4 years 8 months)

I work primarily on backend development using Node.js, TypeScript, and NestJS, while also contributing to frontend development with Svelte and Angular when required by the project.

Yamaha Project

• Developed backend services and REST APIs using NestJS and contributed to the frontend using Svelte.

• Worked on authentication and authorization flows using JWT and Active Directory.

Sura Seguros Project

• Developed backend services and REST APIs using NestJS and contributed to the frontend using Angular.

• Worked with micro-frontend architecture, Behavior-Driven Development using Gherkin, and automated end-to-end testing with Cypress.

Across both projects, I applied Hexagonal Architecture, Test-Driven Development with Jest, Docker, MongoDB, CI/CD, GitLab, and Trunk-Based Development.

Senior backend Enginner

November 2025 - September 2026 (11 months)

NocNoc Project — Cross-Border E-commerce

• Develop and maintain Java and Spring Boot microservices integrating multiple international marketplaces with external partner APIs across catalog, orders, and fulfillment operations.

• Work with AWS services including DynamoDB and Amazon SQS, and use EventBridge Scheduler for recurring jobs and automated processes.

• Create custom AI agents and skills using Anthropic Claude and Claude Code, and use reusable skills defined by NocNoc as part of the team’s AI-assisted development workflow.

• Apply Spec-Driven Development to transform requirements into structured specifications and implementation plans, improving consistency and accelerating software delivery.

Tech lead backend

February 2021 - January 2022 (1 year)

Pickit Project

• Led backend development teams and served as a technical reference for the project.

• Designed technical solutions and microservices, contributing to architecture and technical decision-making.

• Coordinated, supervised, and executed application deployments.

• Created architecture diagrams and technical documentation.

• Implemented Git Flow and supported development and delivery processes using GitLab, Jenkins, and Docker.

• Applied Agile methodologies to organize and coordinate the team’s work.

PHP developer
September 2019 - January 2022 (2 years 5 months)
Greater Buenos Aires

Pickit Project

• Developed and maintained REST APIs, core backend functionality, and microservices using PHP and Symfony 4/5.
• Implemented asynchronous messaging and queue-based processing using RabbitMQ.
• Worked with MySQL, Docker, Git, Jenkins, and Jira throughout the development and deployment lifecycle.

Espinlabs
PHP Developer
October 2018 - September 2019 (1 year)
Capital Federal - Buenos Aires

Multiple Projects

• Developed and maintained backend functionality and REST APIs using PHP and Laravel 4.2/5.6.
• Used Git and GitLab for version control and collaborative development.

Education

Universidad Nacional del Nordeste
Degree in Information Systems, Specialization in Software Engineering and Information Technology/System Technology · (2010 - 2018)

Universidad Nacional del Nordeste
University Programmer Analyst, Specialization in General Computer Programming · (2010 - 2016)
